

2020 Anthem® Flex Herbicide Winter Wheat Broadleaf Assurance

PROGRAM DESCRIPTION:

FMC assures Anthem® Flex herbicide provides 80% henbit and chickweed control up to 45 days after application. Anthem Flex herbicide is an effective herbicide for the control of henbit and chickweed in fall-planted wheat when used according to label directions. Apply 2.5-4.5 ounces (see chart below) of Anthem Flex herbicide per acre as a delayed preemergence application to winter wheat.. The delayed preemergence application timing is defined as 80% of planted wheat seed having a radical at least 0.5 inches long but prior to wheat spiking. This usually occurs three to five days after planting, but can vary widely depending on soil moisture and temperature.

Qualifying Product	Assurance Benefit	Minimum Application Rates by Soil Texture		
		Coarse	Medium	Fine
Anthem Flex herbicide	Up to \$4.00/A if less than 80% henbit or chickweed control up to 45 days after application	2.5 fl. oz./A – 2.7 fl. oz./A	2.75 fl. oz./A – 3.5 fl. oz./A	3.5 fl. oz./A – 4.5 fl. oz./A

FMC assures 80% henbit and chickweed control up to 45 days after application if the following conditions are met:

- Wheat is planted into a weed-free seedbed with no henbit or chickweed germinated or present. Paraquat or other labeled and effective herbicide for these two weeds may be used to ensure no weeds are present at planting.
- Anthem Flex herbicide is applied delayed preemergence as described above.
- The correct label rate is applied according to soil texture. Reduced rates for the appropriate soil-type should not be expected to provide adequate control and will be serviced accordingly.
- At least 0.5 inches of rainfall occurs within 10 days after application.
- Grower must have an untreated check in order to determine level of henbit and chickweed weed control achieved.

In the event a grower does not achieve at least 80% control up to 45 days after application, FMC will pay up to \$4.00/A toward the cost of a postemergence herbicide application of Harmony® Extra SG herbicide with TotalSol® soluble granules.

If ALS-resistant biotypes are present, Harmony Extra SG herbicide with TotalSol soluble granules can be tank mixed with a herbicide with an effective mode of action for control of emerged weeds (2,4-D, dicamba, etc.)

2020 Anthem® Flex Herbicide Winter Wheat Broadleaf Assurance

To be eligible for a claim under this program, growers need to contact their FMC retail market manager or Star Retailer before making an application of the postemergence herbicide to clean up escaped weeds.

Application Period:	September 1, 2020 – November 30, 2020
Program Geography:	AL, AR, CO, DE, GA, KS, KY, LA, MO, MD, MS, NC, NJ, OK, PA, SC, TN, TX, VA, WV
Claim Deadline:	January 31, 2021
Assurance Payment:	30 days after claim submission to FMC

Program Rules & Conditions:

1. FMC reserves the right to change any or all features of this program at any time.
2. Assurance benefit is for product costs only. Application and other related costs are excluded from assurance payments.
3. An authorized FMC representative must be notified of a claim prior to the established deadline and have a reasonable opportunity to inspect prior to any additional product applications. The authorized FMC representative must confirm inadequate product performance.
4. Proof of purchase is required. Only FMC branded products purchased from FMC authorized distributors or retailers and reported by Data Dimensions are eligible for payment under this program.
5. Only product purchased for resale to growers is eligible for payment under the terms of this program.
6. This offer cannot be used in conjunction with any other Anthem® Flex herbicide Performance Assurances.
7. FMC reserves the right to audit all claims. Misreported sales of any type are a clear violation of this program and will be subject to audit and possible forfeiture of any and all program benefits.
